

BABIES AND KIDS CAN HAVE CATARACTS TOO!

Cataract is a clouding of the normally clear lens of the eye. All of the children in these photos have cataract. Early treatment is vital to save vision.

If you notice:

- a white spot on child's pupil, or
- crossed eyes, turned eyes or wandering eyes after a couple of months of age (even if it only happens sometimes)

see your GP or local optometrist without delay.
